Report Overview

E-assisted Bike is a bicycle where the rider's pedalling is assisted by a small electric motor; thus it is a type of low-powered e-bike. However, unlike some other types of e-bikes, pedelecs are classified as conventional bicycles in many countries by road authorities rather than as a type of electric moped. Pedelecs include an electronic controller which cuts power to the motor when the rider is not pedalling or when a certain speed – usually 25 km/h (16 mph) – is reached.

The global E-assisted Bike market size was estimated at USD 14540 million in 2023 and is projected to reach USD 40645.73 million by 2032, exhibiting a CAGR of 12.10% during the forecast period.

North America E-assisted Bike market size was estimated at USD 4615.35 million in 2023, at a CAGR of 10.37% during the forecast period of 2024 through 2032.
