## Abstracts

Electron beam evaporation optical coating machine is a kind of equipment specially used for manufacturing optical thin film. It is based on one kind of physical vapor deposition technology-electron beam evaporation. Operating in a vacuum, the coating machine generates vapor by bombarding a target (i.e., the material to be evaporated) placed in a crucible with a high-energy electron beam and heating it to evaporation temperature. These vapors then condense on the cooled substrate to form a uniform and functional film.

The global E-beam Evaporation System for Optical Coating market size was estimated at USD 340.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
