Abstracts

E-bike Charging Pile is a type of fast charging station. It is small in size and easy to install, suitable for residential and community installations, and can be used for operation. Based on the installation characteristics of E-bike Charging Pile products, they can be divided into wall-mounted charging stations and pole-mounted charging stations. Wall-mounted charging stations include wall-mounted smart charging stations and charging sockets. These products require wall mounting, are small in size, occupy little space, and are easy to install. Pole-mounted charging stations also include the metal brackets required for the charging equipment, which are high-strength, durable, fire-resistant, and more suitable for China's complex geographical environment, with a longer service life and lower maintenance costs. However, they occupy a larger area and are more complex to install than wall-mounted ones. In 2024, the global E-bike Charging Pile service gross profit margin was approximately 30%-50%. The upstream of the industry chain consists of charging station equipment, with raw materials including chargers, controllers, metal materials, plastic materials, and electronic components; the midstream consists of charging station construction and operation companies, i.e., the companies in the report; and the downstream can be implemented in commercial parks, industrial zones, schools, communities, and residential areas, and operated and installed through property management partnerships. The industry development model involves upstream manufacturers providing charging pile equipment and operating platforms to operators. After finding communities to attract investment, operators then sign contracts with the community's property management office. Market Drivers: Electric bicycle charging and swapping facilities, as essential infrastructure for electricity replenishment, serve the transportation industry and are a key node in promoting transportation electrification and low-carbon electricity. Driven by the global consensus on "carbon neutrality," energy transformation, focusing on the development of low-carbon and green energy and taking energy conservation and emission reduction

as strategic breakthroughs, is unfolding globally. my country's 14th Five-Year Plan and the 2035 Vision Outline clearly state the goal of "continuously improving environmental quality and accelerating the green transformation of development patterns." To achieve this goal, promoting green and low-carbon travel is imperative. The safety risks of unauthorized charging are driving the need for charging stations: more and more people are using electric bicycles as a means of transportation. Statistics show that electric bicycles frequently block stairwells and are often parked haphazardly. Coupled with improper charging, this has led to numerous fires. To avoid these dangers, many newly built residential communities have included electric bicycle charging stations in their construction plans. The implementation of the "Guangdong Province Implementation Measures of the Fire Protection Law of the People's Republic of China" on July 1, 2022, has made it inevitable to prohibit electric bicycles from being brought upstairs, thus making public charging stations a necessity. The emergence of charging stations not only improves safety but also facilitates management and changes the phenomenon of haphazard parking.

The global E-bike Charging Pile market size was estimated at USD 2073.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.90% during the forecast period.
