Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on E-cigarette Devices competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.An electronic cigarette or e-cigarette is a handheld electronic device which vaporizes a flavored liquid. The user inhales the vapor. Using e-cigarettes is sometimes called vaping. The liquid in the e-cigarette, called e-liquid, is usually made of nicotine, propylene glycol, glycerine, and flavorings. Not all e-liquids contain nicotine.In 2024, global E-cigarette Devices production reached approximately 3,966.8 M Unit, with an average global market price of around US$ 4.71 per Unit.The e-cigarette devices market comprises electronic nicotine delivery systems (ENDS) designed to heat e-liquids or nicotine salts to create inhalable vapor, offering an alternative to traditional combustible tobacco products. Market growth is fueled by increasing consumer demand for smoke-free options, the perception of reduced health risks compared to conventional cigarettes, and product innovations such as pod-based systems, adjustable power devices, and compact disposable units. Flavor diversity, customizable nicotine levels, and the rise of rechargeable and refillable models have also broadened appeal, particularly among younger adult consumers. Technological improvements in battery life, coil efficiency, and vapor production are enhancing user experience, while regulatory frameworks in key markets influence product design and marketing strategies.Regionally, North America and Europe have been early adopters, supported by established vaping communities and specialized retail channels, though both face tighter regulations aimed at youth prevention and safety standards. Asia-Pacific is emerging as a high-growth region, driven by large smoking populations in countries like China, the Philippines, and Indonesia, along with expanding manufacturing capabilities—especially in China, the largest global producer of e-cigarette devices. The

market's trajectory is shaped by evolving public health policies, taxation structures, and restrictions on flavors or nicotine content, which can both challenge and guide innovation toward compliant, next-generation vaping solutions.

The global E-cigarette Devices market size was estimated at USD 18685.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
