Report Overview

eFuels are produced with the help of electricity from renewable energy sources, water and CO₂ from the air. In contrast to conventional fuels, they do not release additional CO₂ but are climate-neutral. Thanks to their compatibility with today's internal combustion engines, eFuels can also power vehicles, airplanes and ships, thus allowing them to continue to operate but in a climate-friendly manner. The same applies to all heating systems that use liquid fuels. Existing transport, distribution and fuel infrastructures (especially filling stations) can also continue to be used.
