### Report Overview

The global E Scrap Recycling market is experiencing significant growth driven by increasing electronic waste generation, stringent environmental regulations, and rising awareness about resource recovery and sustainability. E-scrap, or electronic scrap, includes discarded electronic devices such as computers, smartphones, televisions, and household appliances, which contain valuable metals like gold, silver, copper, and rare earth elements, as well as hazardous materials requiring safe disposal. The market is propelled by the rapid obsolescence of electronics, technological advancements, and the growing adoption of circular economy practices. Key players in the industry focus on advanced recycling technologies, including mechanical shredding, pyrolysis, and hydrometallurgical processes, to maximize material recovery while minimizing environmental impact. Geographically, regions like North America, Europe, and Asia-Pacific dominate due to high e-waste volumes, supportive policies, and established recycling infrastructure. However, challenges such as informal recycling practices in developing nations, high processing costs, and lack of consumer awareness hinder market expansion. The rise of corporate sustainability initiatives and government incentives for responsible e-waste management are expected to further drive market growth in the coming years.

The global E Scrap Recycling market size was estimated at USD 3364.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
