Abstracts

EAA Dispersion is a polymer emulsion whose main component is ethylene acrylic acid copolymer. EAA emulsion is a stable emulsion formed by dispersing ethylene acrylic acid copolymer in water. Ethylene acrylic acid copolymer is a thermoplastic polymer with good bonding properties and chemical resistance. It can disperse the polymer into tiny particles through the emulsification process and form an emulsion state with water. EAA emulsion usually has good coating properties and can be used in processes such as coating, roller coating, and printing. Due to its good bonding properties, it can be used to bond various substrates such as aluminum foil, paper, PE film, etc. It also has excellent water resistance and chemical tolerance, as well as barrier properties and bonding to flexible packaging substrates. EAA emulsion has a wide range of applications in many fields, including food packaging, medical packaging, and paper coating. It can be used to prepare heat seal adhesives for sealing and preservation of food packaging; it can also be used for heat seal adhesives in medical packaging and barrier heat seal coatings for paper. EAA emulsion usually meets relevant food contact grade standards to ensure that it is safe and reliable in contact with food.
