This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ear Vagus Nerve Stimulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The auricular vagus nerve stimulator is a medical device that electrically stimulates the auricular branch of the vagus nerve. It is mainly used for auxiliary treatment of epilepsy, depression, pain, sleep disorders, anxiety and other diseases. Its principle is to control the symptoms by stimulating the auricular branch of the vagus nerve, affecting the neural activity of the brain, regulating the expression of neurotransmitters, and improving the blood flow in the brain. There are two types of ear vagus nerve stimulators: implantable and non-implantable. The advantage of the non-implantable type is that it is non-invasive, safe, convenient and effective. It can be worn on the ear through headphones or ear clips. The ear vagus nerve stimulator is a medical device used to treat certain neurological diseases. It regulates the body's physiological functions by stimulating the vagus nerve in the ear. With the continuous advancement of neuroscience and medical technology, the ear vagus nerve stimulator will be more and more widely used in the treatment of anxiety, depression, epilepsy and other diseases. In the future, this product may develop in a more precise and personalized direction to improve the treatment effect and patient comfort. At the same time, with the rise of telemedicine, the ear vagus nerve stimulator may realize remote control and monitoring functions. Auricular vagus nerve stimulation (taVNS) is a new type of non-invasive neuromodulation therapy developed based on traditional implantable vagus nerve stimulation and the anatomical characteristics of the vagus nerve. It has a wide range of central nervous system regulation effects. By regulating the functions of the brain's neural and cognitive-related cerebral cortex and nerve nuclei and promoting neurotransmitter transmission, it has broad application prospects in the field of epilepsy.

treatment, and can also improve symptoms such as anxiety, depression, insomnia, and cognitive impairment.
