Report Overview

This report studies the Earbuds market. Earbuds (or head-phones in the early days of telephony and radio) are a pair of small loudspeaker drivers worn on or around the head over a user's ears. They are electroacoustic transducers, which convert an electrical signal to a corresponding sound. Headphones let a single user listen to an audio source privately, in contrast to a loudspeaker, which emits sound into the open air for anyone nearby to hear. Headphones are also known as earspeakers, earphones or, colloquially, cans. Circumaural and supra-aural headphones use a band over the top of the head to hold the speakers in place. The other type, known as earbuds or earpieces consist of individual units that plug into the user's ear canal. In the context of telecommunication, a headset is a combination of headphone and microphone. Headphones connect to a signal source such as an audio amplifier, radio, CD player, portable media player, mobile phone, video game console, or electronic musical instrument, either directly using a cord, or using wireless technology such as Bluetooth, DECT or FM radio. The first headphones were developed in the late 19th century for use by telephone operators, to keep their hands free. Initially the audio quality was mediocre and a step forward was the invention of high fidelity headphones.

Headphones are made in a range of different audio reproduction quality capabilities. Headsets designed for telephone use typically cannot reproduce sound with the high fidelity of expensive units designed for music listening by audiophiles. Headphones that use cables typically have either a 1/4 inch (6.35mm) or 1/8 inch (3.5mm) phone jack for plugging the headphones into the audio source. Some stereo earbuds are wireless, using Bluetooth connectivity to transmit the audio signal by radio waves from source devices like cellphones and digital players. Due to the spread of wireless devices in recent years headphones are increasingly used by people in public places such as sidewalks, grocery stores, and public transit. Headphones are also used by people in

various professional contexts, such as audio engineers mixing sound for live concerts or sound recordings and DJs, who use headphones to cue up the next song without the audience hearing, aircraft pilots and call center employees. The latter two types of employees use headphones with an integrated microphone.

Earbuds rest inside the outer ear, with their speakers aimed into the ear canal. Earbuds are a familiar sight for commuters, as they're usually included with smartphones, media players, and similar devices. Despite their improved fidelity over earphones, many listeners find that earbuds still allow too much background noise, even if they fit correctly.

The Earbuds market consists of a well-established group of brand name manufacturers and new entrants. Crowdfunding campaigns have showed that there is plenty of scope for innovation. The world leading players in the Earbuds market are Apple, Samsung, Sony, GN (Jabra), Bragi, Doppler Labs, Skybuds and so on. These Top companies currently account for more than 80% of the total market share.

The downstream buyers of Earbuds product are general public, the consumers choose this smart Earbuds with a variety purpose of training, activity tracking, music and phone, as well as sound control and hearing safety. In the vertical of applications, the consumer segment took a market share of 71%, in terms of revenue. On the contrast, the healthcare segment took 28%.
