Report Overview

Earth friendly plastic bags are created using materials that will allow the bags or sacks to completely decompose after a period of time. They are also called biodegradable plastic bags, most of which are said to decompose in three years, although many completely disintegrate in less time. The bags leave no discernible trace and are completely harmless to the environment. Biodegradable plastic bags require two key elements in order to decompose. The bags need to be exposed to oxygen and light. Therefore, biodegradable plastic bags do not start to decompose from the date of manufacture, only after they have been exposed to light and air.
