Report Overview

Earthquake isolators, also known as seismic isolators or base isolators, are mechanical devices or systems designed to protect buildings and structures from the damaging effects of ground motion during earthquakes. They work by decoupling the building or structure from the ground motion, allowing it to move independently to absorb and dissipate seismic energy. This helps reduce the forces transmitted to the structure, minimizing damage and increasing safety.

The global Earthquake Isolators market size was estimated at USD 168.94 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
