Abstracts

EAS system or Electronic Article Surveillance System is a comprehensive security solution used in a store environment to prevent theft and unauthorized merchandise removal. It usually consists of three main components: EAS anti-theft tags, detection systems, and decoders/lock openers. With the development of optoelectronic information technology, microelectronics technology, microcomputer technology and video image processing technology, traditional security systems are gradually moving towards digitalization, networking and intelligence. EAS systems have a wide range of applications and have expanded to a variety of industries such as clothing, department stores, supermarkets and books. The global EAS system market size is showing a steady expansion trend. Regional development characteristics: North America is the world's largest electronic commodity anti-theft system market, accounting for more than 30% of the market share. The region has a mature economic development and a developed retail market, and has a high demand for commodity anti-theft systems. In addition, North America has a high acceptance of technological innovation and intelligent applications, which has promoted the continuous upgrading and intelligent development of EAS systems. The European market is also one of the important markets for EAS systems, occupying a considerable market share. The demand for commodity anti-theft systems in Europe mainly comes from industries such as clothing, supermarkets and libraries. With the recovery of the European economy and the growth of the retail market, the demand for EAS systems is also increasing. At the same time, Europe has high requirements for environmental protection and sustainable development, which has promoted the development of EAS systems in a more environmentally friendly and sustainable direction. The Asia-Pacific market is one of the fastest growing EAS system markets in recent years. The region has a rapidly developing economy, a large population, and huge retail market potential. As consumers in the Asia-Pacific region continue to increase their requirements for product

quality and shopping experience, the demand for product anti-theft systems is also increasing. At the same time, the acceptance of technological innovation and intelligent applications in the Asia-Pacific region is also increasing, which has promoted the rapid development of EAS systems.

Price fluctuations: In recent years, with the continuous upgrading of EAS system technology and the intensification of market competition, price fluctuations have become one of the focuses of market attention. On the one hand, with the continuous increase in raw material and labor costs, the production cost of EAS systems is also increasing, resulting in an increase in the prices of some products. On the other hand, with the intensification of market competition and the continuous changes in consumer demand, some manufacturers have reduced product prices and improved market competitiveness through technological innovation and cost control. Therefore, overall, the market price of EAS systems shows a fluctuating upward trend.

Development trend: With the continuous development of technologies such as artificial intelligence, big data and the Internet of Things, EAS systems are moving towards a more intelligent, automated and integrated direction. For example, by introducing RFID technology, real-time tracking and inventory management of goods can be achieved; by introducing machine learning and artificial intelligence technology, automatic identification and alarm of abnormal behavior and theft can be achieved. As the world's attention to environmental protection and sustainable development continues to increase, EAS systems are also developing in a more environmentally friendly and sustainable direction. For example, low-energy and sustainable materials are used to manufacture anti-theft tags and supporting equipment; system energy consumption and operating costs are reduced by optimizing system design and improving energy efficiency.

Overall, with the continuous advancement of technology and the continuous development of the market, the EAS system market will usher in broader development prospects and opportunities.
