Report Overview

EC fans are powered by brushless DC motors, which are also known as EC motors. DC motors can be up to 30% more efficient than AC motors due to its inherent design that uses permanent magnets to generate a secondary magnetic field rather than copper windings. Brushless DC motors are typically 85-90% efficient while brushed DC motors are generally in the range of 75- 80% efficient; the brushed motors lose efficiency from brush friction. The increased efficiency of the brushless motor means that less energy is lost as heat, while more energy is turned into rotational force and therefore power. EC motors are controlled by external or onboard electronics that convert the incoming AC power signal to the DC voltage needed by the motor. The electronic circuitry performs the function of the mechanical commutation that switches the direction of the current and the magnetic field polarity to induce the motor's rotation. The design allows for more accurate and efficient motor control, as adjusting the power to the EC motor controls the EC fan speed, thereby improving performance.

The global EC Fan Motor market size was estimated at USD 819.70 million in 2023 and is projected to reach USD 1420.54 million by 2032, exhibiting a CAGR of 6.30% during the forecast period.

North America EC Fan Motor market size was estimated at USD 237.28 million in 2023, at a CAGR of 5.40% during the forecast period of 2024 through 2032.
