Abstracts

EC fans are powered by brushless DC motors, which are also known as EC motors. DC motors can be up to 30% more efficient than AC motors due to its inherent design that uses permanent magnets to generate a secondary magnetic field rather than copper windings. Brushless DC motors are typically 85-90% efficient while brushed DC motors are generally in the range of 75- 80% efficient; the brushed motors lose efficiency from brush friction. The increased efficiency of the brushless motor means that less energy is lost as heat, while more energy is turned into rotational force and therefore power. EC motors are controlled by external or onboard electronics that convert the incoming AC power signal to the DC voltage needed by the motor. The electronic circuitry performs the function of the mechanical commutation that switches the direction of the current and the magnetic field polarity to induce the motor's rotation. The design allows for more accurate and efficient motor control, as adjusting the power to the EC motor controls the EC fan speed, thereby improving performance.

Energy Efficiency: EC fan motors are known for their high energy efficiency compared to traditional AC motors. This trend toward energy efficiency was expected to continue, driven by stricter energy efficiency regulations and a growing focus on sustainability. Manufacturers and consumers alike were increasingly looking for ways to reduce energy consumption, and EC fan motors were a key component in achieving these goals.

Green Building Standards: The adoption of green building standards and certifications, such as LEED (Leadership in Energy and Environmental Design), was driving the demand for energy-efficient HVAC systems, including EC fan motors. Buildings were being designed and retrofitted with a greater emphasis on sustainability and reduced environmental impact.

Integration with Smart Building Technologies: The trend toward smart buildings and the Internet of Things (IoT) was influencing the development of EC fan motors. These motors could be integrated into building automation systems, allowing for more precise control, monitoring, and optimization of HVAC systems. This integration

improved overall system performance and energy efficiency.

The global EC Fan Motor market size was estimated at USD 902.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
