Abstracts

An Ecall System Backup Battery is a specialized power source designed to ensure the continuous and reliable operation of eCall (emergency call) systems in vehicles, which are mandated in many regions to automatically contact emergency services in the event of a serious accident. These batteries serve as a critical fail-safe, providing backup power to the eCall module, GPS, and communication components when the vehicle's main electrical system is compromised, such as during a collision that results in power loss. They are engineered to meet stringent automotive standards for durability, temperature resistance, and long-term reliability, often utilizing lithium-based chemistries for their high energy density and ability to hold a charge over extended periods with minimal self-discharge. The primary function is to guarantee that the eCall system can transmit accurate location and crash data to emergency responders even under adverse conditions, thereby enhancing road safety and compliance with regulatory requirements.

The global Ecall System Backup Battery market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
