Abstracts

ECCO?R Devices are a type of advanced medical technology designed for extracorporeal carbon dioxide removal. These devices are used to enhance respiratory support in patients with severe respiratory or cardiac conditions by efficiently removing carbon dioxide from the blood outside the body. ECCO?R systems work by circulating the patient's blood through a specialized filter or membrane that separates carbon dioxide from the blood, which is then returned to the patient. This process helps manage and alleviate the symptoms of conditions such as acute respiratory distress syndrome (ARDS) or chronic obstructive pulmonary disease (COPD) by improving blood gas balance and reducing the strain on the lungs. ECCO?R Devices are particularly valuable in critical care settings, offering a crucial support mechanism for patients with compromised respiratory function.

The global ECCO?R Devices market size was estimated at USD 64.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
