Report Overview

The green composites market is a rapidly expanding sector within the global composites industry. Green composites, also known as bio composites or eco-composites, are composite materials made from renewable resources such as natural fibers and bio-based resins. These materials offer several advantages over traditional composites, including reduced environmental impact, improved sustainability, and enhanced performance characteristics. Green composites are composite materials that are derived from renewable resources and have a lower carbon footprint compared to conventional composites. They are made by combining natural fibers, such as jute, hemp, or flax, with bio-based resins, which are derived from plant-based sources like soybeans or cornstarch. The resulting composite material possesses excellent mechanical properties, high strength-to-weight ratio, and good durability.
