Abstracts

Eco-friendly food waste solutions refer to a range of food waste treatment technologies and service systems focused on environmental protection and resource utilization, aiming to reduce the negative impact of food waste on the environment. These solutions encompass everything from source prevention, intelligent identification, and sorting and collection to end-of-life treatment (such as composting, anaerobic digestion, and biomaterial extraction), and utilize technologies to achieve waste reuse or energy conversion. Key characteristics include low carbon emissions, sustainability, a circular economy orientation, and a strong focus on food safety and resource efficiency. This sector integrates the Internet of Things, AI identification, biotechnology, and policy compliance, and is a key support for promoting green cities and sustainable agriculture. Environmentally friendly food waste solutions are at the intersection of policy-driven and technological innovation, and their industry chain structure is becoming increasingly mature: the upstream covers food production, packaging, transportation, and equipment manufacturing, while the downstream connects composting plants, energy companies, agricultural bases, feed processing, and consumer platforms. As global regulations tighten, mandatory classification and resource-based processing have become an industry consensus. Under the pressure of ESG goals, companies are accelerating outsourcing services and platform cooperation. The widespread application of AI and IoT technologies has significantly improved the efficiency of waste identification and tracking, while anaerobic digestion and biomaterial extraction have become high-value-added treatment directions. The Asia-Pacific region, especially China and India, is rapidly emerging as a core of global growth due to policy support and accelerated urbanization.

The global Eco-Friendly Food Waste Solutions market size was estimated at USD 18185.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.30% during the forecast period.
