## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Eco-Friendly Honeycomb Cardboard competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Eco-Friendly Honeycomb Cardboard is a lightweight, high-strength packaging and structural material made from recycled kraft paper or corrugated fiberboard, formed into a hexagonal core structure that mimics the natural geometry of a honeycomb. This design offers exceptional compression strength while using minimal raw material, making it a highly sustainable and efficient alternative to wood, plastic, or solid cardboard. The outer layers (liners) are typically made from biodegradable or recyclable paperboard, and water-based adhesives are often used, further enhancing its environmental credentials. The honeycomb structure provides excellent rigidity and shock absorption, making it suitable for protective packaging, load-bearing pallets, partition panels, and furniture components. Its recyclable nature, combined with a low carbon footprint during production and disposal, supports circular economy practices. As industries seek alternatives to non-biodegradable materials, eco-friendly honeycomb cardboard is increasingly favored for its cost-effectiveness, customizability, and compliance with green packaging regulations.

The global Eco-Friendly Honeycomb Cardboard market size was estimated at USD 557.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
