Ecotoxicological studies constitute a specialized field of environmental science focused on investigating the adverse effects of chemical, physical, and biological agents on living organisms within ecosystems, particularly emphasizing impacts at the population, community, and ecosystem levels rather than solely on individual organisms. These studies employ a range of standardized laboratory and field-based methodologies?including toxicity testing, bioassays, biomonitoring, and ecological risk assessments?to evaluate contaminants such as pesticides, industrial chemicals, pharmaceuticals, and heavy metals, thereby providing critical data for regulatory compliance, environmental policy-making, chemical safety approval, and remediation strategies aimed at preserving biodiversity and ecosystem health.

The global Ecotoxicological Studies market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
