Abstracts

Ectoine, chemically known as tetrahydromethymidine carboxylic acid/tetrahydropyridine, is a derivative of an amino acid that originated in a salt lake in Egypt. The molecules of ectoine, which are themselves highly absorbable and, more importantly, structurally special, act as "little shields" around the bacteria's DNA and proteins (enzymes), reducing the exposure of the intense uv rays in high-salt conditions. Its unique molecular structure makes it have strong water molecular complexing ability. The main manufacturers of Global Ectoine include Bloomage Biotechnology, FREDa, KLNT, Puri Pharm and SIYOMICRO. These top 5 manufacturers hold a market share about 85%. China is the major producing region in the world, with about 90% market share. In terms of product, no less than 99% is the largest segment, with a share over 90%. In terms of application, the product is most widely used in skin care products.

The global Ectoine market size was estimated at USD 49.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
