## Abstracts

An ectoparasiticide is an antiparasitic drug used in the treatment of ectoparasitic infestations. Commonly used ectoparasites are Baishenning, sulfur, lindane, DDT, benzyl benzoate, ivermectin and clomiphene. Ectoparasiticides also play a vital role in animal health protection through the prevention and control of severe zoonotic diseases. Prevention of animal diseases is also critical, as they pose negative constraints to sustainable agricultural development and food security, and can undermine the economics of international trade in livestock commodities. The aforementioned factors are likely to drive the growth of the external and external parasiticides market during the forecast period.

The global Ectoparasiticides market size was estimated at USD 10680.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
