Abstracts

Eddy current nondestructive testing solutions are high-precision inspection systems based on the principle of electromagnetic induction. They are used to identify cracks, corrosion, fatigue damage, thickness variations, and conductivity differences in metals and conductive materials without damaging the material structure. This solution typically consists of a high-frequency excitation source, a detection probe, a signal acquisition module, data processing software, and a human-machine interface. It enables real-time, non-contact inspection and is widely used in aerospace, nuclear power, rail transportation, automotive manufacturing, petrochemicals, and metal processing. By analyzing the response to changes in the surface current distribution of materials, the system can detect and automatically determine micron-level defects. With the integration of intelligent inspection technology and AI algorithms, this product is developing towards higher sensitivity, automation, and visualization, becoming a crucial supporting equipment for structural health monitoring and intelligent manufacturing quality control in the Industry 4.0 era.

The global Eddy Current Nondestructive Testing Solution market size was estimated at USD 918.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
