Abstracts

The Edge AI accelerator card is a specialized hardware component designed to perform high-speed, low-power artificial intelligence inference tasks directly at the edge of a network on devices or local systems rather than in centralized data centers. These cards typically integrate dedicated processors, such as GPUs, TPUs, NPUs, or FPGAs, optimized for running machine learning models efficiently, and they interface with host systems via standard slots like PCIe or M.2. By offloading AI workloads from general-purpose CPUs, they enable real-time data processing with minimal latency, reduced bandwidth usage, and enhanced privacy, making them essential for applications like autonomous vehicles, smart cameras, industrial IoT, robotics, and healthcare devices where immediate, on-device decision-making is critical.

The global Edge Ai Accelerator Card market size was estimated at USD 1050.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
