## Abstracts

Edge inference acceleration cards are specialized hardware devices designed to accelerate artificial intelligence (AI) inference tasks at the edge, where data is generated, rather than relying on cloud computing. These cards are typically equipped with dedicated processors, such as GPUs, TPUs, or ASICs, optimized for AI workloads, including deep learning and neural network inference. Key features include low latency, high computational efficiency, energy efficiency, and support for multiple AI frameworks (e.g., TensorFlow, PyTorch). By offloading and speeding up inference computations, these cards enable real-time processing of AI applications like video analytics, autonomous systems, industrial IoT, and smart cities. Their deployment at the edge reduces dependency on centralized cloud services, lowers data transmission costs, and enhances data privacy.

The global Edge Inference Acceleration Cards market size was estimated at USD 3499.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
