EDM Drilling Machine, also known as electrical discharge machining drilling, is accomplished one of two ways ? ram EDM and small hole EDM, both of which use an electrode that shoots out electrical charge or sparks which are hot enough to erode away any metal. Holes can be made on curved and angular surfaces, and they are drilled quickly, with accuracy and completely straight. Any electrically conductive material may be drilled by this method, including aluminum, copper, steel, stainless steel, zinc, tin, titanium, gold, lead, silver, iron and bronze. The global EDM Drilling Machines market is accelerated by factors such as industrial expansion, rising demand for precise components, improving economies and technological advancements.
