The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on EDM Graphite Electrode competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global EDM graphite electrode production reached approximately 2.58 million units, with an average global market price of around US\$50 per unit. Electrical Discharge Machining (EDM) is an electrothermal method based on the thermal effect of electric current. Its principle is to take advantage of the electrocorrosion phenomenon between the electrode and the workpiece during pulse spark discharge, to remove excess metal and meet the machining requirements of corresponding parts on size, shape, and surface quality. In electrical discharge machining, graphite materials have high strength, high temperature resistance, high electrical conductivity, high corrosion resistance, and excellent thermal shock resistance, and can be used for stable discharge machining. Therefore, they are widely used as electrode materials for manufacturing high-precision parts. The EDM Graphite Electrode market focuses on high-quality graphite electrodes used in electrical discharge machining (EDM) processes, which are essential for precision shaping and cutting of hard metals in industries such as automotive, aerospace, and tool manufacturing. Market growth is driven by increasing demand for precision-engineered components, rising industrial automation, and advancements in high-performance graphite materials. Key trends include the development of electrodes with enhanced conductivity, longer lifespan, and compatibility with high-speed EDM machines, alongside a growing emphasis on cost-effective production and sustainable sourcing of raw materials.

The global EDM Graphite Electrode market size was estimated at USD 129.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20%

during the forecast period.
