Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on EDTA-2Na (Ethylenediaminetetraacetic Acid Disodium Salt) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. EDTA-2Na (Ethylenediaminetetraacetic Acid Disodium Salt) is a good compounding agent in chemistry. The chemical formula is $C_{10}H_{14}N_2Na_2O_8$, the molecular weight is 336.206, it has six coordination atoms, and the complex formed is called a chelate. EDTA is often used in coordination titration, usually to determine the content of metal ions. EDTA has important uses in dye, food, pharmaceutical and other industries. Disodium EDTA is a tasteless, odorless or slightly salty white or milky white crystal or granular powder, odorless and tasteless. It is soluble in water and extremely insoluble in ethanol. It is an important chelating agent that can chelate metal ions in solution. It prevents discoloration, deterioration, turbidity and oxidative loss of vitamin C caused by metals, and also improves the antioxidant properties of oils (trace metals in oils such as iron and copper can promote the oxidation of oils). In 2024, global EDTA-2Na (Ethylenediaminetetraacetic Acid Disodium Salt) production reached approximately 99.85 K MT, with an average global market price of around US\$ 3,896 per MT. Water treatment and industrial cleaning. Tightening environmental standards, increased utilization of industrial circulating water and recycled water, and intensified supervision of heavy metal emissions have continued to increase the demand for stable chelating agents. EDTA disodium is still a cost-effective main product in boiler water, cooling water, metal cleaning and other scenarios. Daily chemical and household cleaning. Laundry detergents, dishwashing liquids, and cleaning products in hard water areas are constantly being upgraded to high-end formulas. The role of disodium EDTA in improving detergency and stabilizing the anti-

corrosion system will not be completely replaced in the short term. As long as residents' consumption upgrades and brand formula upgrades continue, this scenario will maintain moderate growth. Textile, paper and other traditional industries. The rigid demand for metal ion control in paper bleaching, fiber bleaching, and pre-treatment of printing and dyeing is still there. Although unit consumption has been continuously optimized, as emerging market textile and papermaking production capacity is concentrated in the Asia-Pacific, the overall basic demand for EDTA disodium is still relatively stable.

The global EDTA-2Na (Ethylenediaminetetraacetic Acid Disodium Salt) market size was estimated at USD 389.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
