Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on EEG Conductive Gel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of EEG conductive gel reached 62 million units, with an average selling price of US\$3.2 per unit. EEG conductive gel is a hydrogel system used between EEG electrodes and skin to reduce contact resistance, improve signal transmission stability, and reduce motion artifacts. It is widely used in clinical neurological monitoring, sleep monitoring, brain function research, and neurorehabilitation. Upstream raw materials mainly include carbomer or acrylic thickeners, glycerin or propylene glycol humectants, sodium chloride conductive salt, medical-grade water, and small amounts of preservatives and surfactants. Upstream suppliers include Lubrizol, BASF, Dow, SKC, and domestic companies such as Bluestar Chemical and Kingfa Science & Technology. Downstream supply relationships primarily target hospital neurology departments, sleep centers, brain-computer interface laboratories, and portable EEG device brands, with representative clients including Philips Sleep, Compumedics, and Neuracle. Global total production capacity is approximately 120 million units per year, with an industry average gross margin of approximately 28%-35%. Downstream consumption comprises approximately 60% for clinical EEG monitoring, 20% for sleep medicine, 10% for research and brain-computer interfaces, and 10% for other uses. Upstream material consumption includes approximately 60% for traditional Chinese medicine purified water, 15% for humectants, 10% for thickeners, approximately 5% for conductive salts and preservative systems combined, and approximately 10% for packaging and excipients. Future growth lies in the development of products with disposable electrode patches, wearable EEG headbands, and home sleep monitoring devices. Demand and business opportunities will come from the continued expansion of

EEG monitoring into out-of-hospital settings, continuous monitoring, brain-computer interface training, and neurological disease screening for the aging population.

The global EEG Conductive Gel market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
