### Report Overview:

Effect pigments are embedded in coatings and paints to change the hue or gloss level and to give the target object a certain texture. Unlike classic pigments, effect pigments are flaky. The gloss effect is caused by reflection or interference and not the typical scattering.

They are used in a variety of applications including coatings, personal care products, packaging plastics, inks and many other applications. Effect pigments are used whenever a soft shine, a satin luster or a brilliant metallic appearance are desired.
