Abstracts

The Edge Defined Film-fed Growth (EFG) crystal pulling furnace is a type of crystal growth equipment that uses the EFG technique to produce crystals of specific shapes. In an EFG crystal pulling furnace, the molten material is passed through a die that defines the shape of the crystal growth. The melt solidifies upon contact with a seed crystal on the die surface, and as the seed is pulled and the die rotated, a crystal of the desired shape is gradually formed. This method is suitable for growing crystals of irregular shapes such as long fibers, tubes, or plates.

The global EFG Crystal Pulling Furnace market size was estimated at USD 436.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
