Abstracts

Egg white powder high gel is a specialized form of spray-dried egg white protein that has been processed or treated to enhance its gelling properties, resulting in a product that forms firm, stable gels when rehydrated and heated. It is produced by separating egg whites from yolks, pasteurizing the liquid, and then spray-drying it into a fine powder, with additional processing steps such as controlled heating or pH adjustment applied to maximize gel strength and water-binding capacity. This ingredient is valued for its functional performance in applications requiring high viscosity, structural integrity, and heat-set gelation, such as in meat analogs, baked goods, confectionery, and prepared foods, where it serves as a protein-rich, allergen-aware (depending on formulation), and shelf-stable alternative to fresh egg whites.

The global Egg White Powder High Gel market size was estimated at USD 180.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
