Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Egg Whites competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Egg whites, also known as albumen, are the clear, viscous liquid part of an egg that surrounds the yolk. Comprising approximately two-thirds of an egg's total liquid weight, they are primarily composed of water (about 90%) and protein (about 10%), with negligible fat and cholesterol. The main protein in egg whites is albumin, along with smaller amounts of globulins and mucoproteins. Their unique composition gives them exceptional functional properties crucial in cooking and food manufacturing, such as the ability to form stable foams when beaten (due to protein denaturation), act as a binding agent, and provide a low-calorie, high-protein ingredient. Widely used in baking for meringues, souffl?s, and light cakes, as well as in health-conscious diets and sports nutrition, egg whites offer a versatile and nutritious component free from the fat and cholesterol found in the yolk.

The global Egg Whites market size was estimated at USD 1992.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
