### Report Overview

UHV transmission and a number of UHVAC circuits have already been constructed in different parts of the world. For example, 2,362 km of 1,150 kV circuits were built in the former USSR, and 427 km of 1,000 kV AC circuits have been developed in Japan (Kitawaki powerline). Experimental lines of various scales are also found in many countries. However, most of these lines are currently operating at lower voltage due to insufficient power demand or other reasons. There are fewer examples of UHVDC. Although there are plenty of  $\pm 500$  kV (or below) circuits around the world, the only operative circuits above this threshold are the Hydro-Quebec's electricity transmission system at 735 kV AC (since 1965, 11,422 km long in 2018) and Itaipu  $\pm 600$  kV project in Brazil. In Russia, construction work on a 2400 km long bipolar  $\pm 750$  kV DC line, the HVDC Ekibastuz–Centre started in 1978 but it was never finished. In USA at the beginning of the 1970s a 1333 kV powerline was planned from Celilo Converter Station to Hoover Dam. For this purpose a short experimental powerline near Celilo Converter Station was built, but the line to Hoover Dam was never built.
