Report Overview

An eight-cylinder engine is an internal combustion engine that includes eight cylinders. During the working process, the eight-cylinder engine pushes the piston down through the energy generated by burning fuel, and then turns the crankshaft through the connecting rod to convert the linear motion of the piston into rotary motion. An eight-cylinder engine can produce more power and torque than a six-cylinder or four-cylinder engine because it has more cylinders and can burn more fuel in one engine cycle.
