## Abstracts

Kinesiology tape or kinesiology therapeutic tape, Kinesio tape is an elastic cotton strip with an acrylic adhesive. It's a thin, flexible tape that is meant to relieve pain, reduce swelling and inflammation, and provide support to joints and muscles. K-tape was originally developed as a way to enhance athletic performance. Most of the users are athletes, and the medical community has begun to use it to treat joint diseases. Fitness enthusiasts who don't exercise often but suffer from joint pain can also relieve the pain through the application of intramuscular patch. Continuous innovation in kinesio tape, including enhanced adhesive properties, breathable materials, and new designs (such as pre-cut or bi-elastic tapes), has improved user experience and effectiveness. This innovation attracts both professional athletes and average consumers. The growing number of people participating in sports, recreational activities, and fitness programs has led to a higher demand for products that support injury prevention and recovery. As more individuals engage in physical activities, the need for supportive gear, including kinesiology tape, rises. There is a heightened awareness of the prevalence and risks of sports-related injuries among athletes and the general public. This increased consciousness drives the demand for preventive measures like kinesiology tape to support joints and muscles during physical activity. With an increase in health and fitness awareness, many consumers now buy kinesiology tape for home use, particularly for self-treatment and injury prevention during workouts. The expansion of sports medicine practices and rehabilitation centers has created a greater demand for kinesiology tape. Healthcare professionals utilize tape extensively for injury treatment, recovery support, and rehabilitation protocols, influencing its market growth.

The global Kinesio Tape market size was estimated at USD 299.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
