Abstracts

Elastomer Fatigue Analysis Software is a specialized engineering simulation tool designed for elastomeric materials such as rubber, silicone, and thermoplastic elastomers (TPEs) and related components. Its core function is to digitally simulate the mechanical response and fatigue damage process of elastomeric components under actual operating conditions (such as cyclic loading, vibration, temperature changes, and media erosion). This allows for accurate prediction of fatigue crack initiation locations, propagation paths, and service life, solving the challenges of fatigue analysis for elastomeric materials. It provides a scientific basis for product design optimization, material selection, and reliability verification, ultimately reducing the risk of product failure due to fatigue, shortening development cycles, and controlling production costs.

The global Elastomer Fatigue Analysis Software market size was estimated at USD 379.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
