### Report Overview

There is an elastic capsule in the elastic analgesic pump, and the analgesic liquid prepared by the doctor according to the individual differences of patients is filled in the capsule of the analgesic pump. The analgesic pump relies on elastic force, and routinely injects analgesic drugs into the intravenous cavity at a constant speed of 1-2 ml/hour. The locking time of the pump is generally 24 to 48 hours, and the indwelling time is determined according to the needs of the patient, and it can be left in place for a long time. During this period, doctors regularly follow up, supplement the liquid medicine, and check and record relevant conditions.

This therapy has the characteristics of less analgesic drug consumption, safety and easy control, and high analgesic effectiveness.
