## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Eldecalcitol Preparations competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Eldecalcitol preparations are novel active vitamin D<sub>2</sub> derivatives primarily used for the treatment of osteoporosis. They work by inhibiting bone resorption, enhancing calcium absorption, and improving bone mineral density. Commonly formulated as soft capsules, these preparations are suitable for elderly individuals, postmenopausal women, and patients with abnormal bone metabolism. Compared to conventional vitamin D analogs, eldecalcitol offers stronger bone-targeting effects with a lower risk of hypercalcemia, making it a safer option in clinical practice. With an aging population and growing awareness of bone health, its use in orthopedics and geriatric medicine continues to expand.
