Report Overview

An electric air compressor for fuel cells is a device that provides compressed air to a fuel cell stack to maintain the desired pressure and flow rate of the reactant gas. It is driven by an electric motor, which receives power from the fuel cell system or an external source. The electric air compressor can be a centrifugal compressor, a positive displacement compressor, or other types of compressors, depending on the specific application requirements. The compressed air is then sent to the fuel cell stack, where it reacts with the reactant gas to produce electricity and water.
