### Report Overview:

An airplane tug is used to prepare an aircraft for take-off or transport a craft for regular maintenance and repair. It's a crucial component of any airport or hangar's ground support equipment (GSE). In this article, we're taking a look at some of the more common types of aircraft towing equipment available on the market, from small aircraft tugs to electric towbarless tractors, and the many benefits they provide. Electric aircraft tugs have all the same advantages and features that towbarless airplane tugs offer, but with one major upgrade: electricity. An electric airplane tug is powered by batteries, so there's no expensive refueling or time-intensive maintenance — simply plug it in to charge! Additionally, electric aircraft tugs cut down on noise pollution and harmful greenhouse gas emissions. An electric motor is virtually silent, helping to significantly cut down on aviation-related noise emissions from hangars and airports. And because these airplane tugs run completely on battery power, they don't emit any harmful exhaust, making them safe to use on the tarmac, in hangars and through production halls.

The Global Electric Airplane Tugs Market Size was estimated at USD 120.86 million in 2023 and is projected to reach USD 161.04 million by 2029, exhibiting a CAGR of 4.90% during the forecast period.
