Report Overview:

Wire arc spray involves two consumable metal or alloy wires. When fed into the spray gun, the twin wires which are electrically charged with opposing polarity will create arc while contacting each other at the designated position in front of the gun. The heat of the arc melts the metal wires, and the melting material is atomized by compressed air into particles and sprayed onto the surface of a substrate. The two wires are fed into the arc spray gun simultaneously at a constant rate and by this way, arc spray can carry out large area of coating operations.
