Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Brake Booster competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Electric Brake Booster production reached approximately 30.42 million units, with an average global market price of around US\$250 per unit. An electric brake booster is an advanced braking component that replaces traditional vacuum brake boosters with an electric motor-driven mechanism. It enhances braking performance by providing precise and consistent brake force assistance, independent of engine vacuum. This technology is especially critical in electric and hybrid vehicles, where engine vacuum is either minimal or unavailable. The system improves braking responsiveness, supports regenerative braking integration, and contributes to overall vehicle safety and energy efficiency. The global electric brake booster market has seen significant growth in recent years, driven primarily by the expanding adoption of electric vehicles (EVs) and advanced driver assistance systems (ADAS). As automakers push toward electrification and autonomous driving, electric brake boosters are becoming essential components due to their reliability, fast response, and compatibility with electronic braking systems. Additionally, stricter safety regulations and consumer demand for enhanced vehicle performance are encouraging OEMs to integrate more advanced braking technologies. Asia-Pacific, particularly China, remains the largest manufacturing and consumption hub due to strong EV production, while North America and Europe are experiencing steady growth through regulatory support and increased investment in smart mobility solutions. The market is expected to continue evolving with innovations in brake-by-wire systems and further integration into vehicle control architectures.

The global Electric Brake Booster market size was estimated at USD 7606.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.00% during the forecast period.
