### Report Overview

An electric bus pantograph charger is a system designed for the rapid charging of electric buses through an overhead pantograph device. The pantograph charger consists of a retractable arm mounted on the charging infrastructure or bus depot, and a complementary receptor unit installed on the electric bus roof. When the bus pulls into the charging station or depot, the pantograph extends down to make contact with the receptor, establishing a connection for the transfer of electric power. This technology enables quick and efficient charging without the need for physical plug-in connections, making it a convenient solution for maintaining the operational readiness of electric bus fleets in public transportation systems.

The global Electric Bus Pantograph Charger market size was estimated at USD 707 million in 2023 and is projected to reach USD 1510.36 million by 2032, exhibiting a CAGR of 8.80% during the forecast period.
