The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Car Adhesive competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electric car adhesive refers to specialized adhesives used in the manufacturing and assembly of electric vehicles (EVs). These adhesives are designed to meet the specific requirements of electric vehicle construction, addressing challenges related to bonding similar and dissimilar materials, lightweighting, environmental considerations, vibration resistance, and stress dispersal. Electric car adhesives are formulated to provide strong and durable bonds between different materials used in EVs, such as aluminum, steel, composites, and plastics. They often offer high bond strength, flexibility, and excellent adhesion properties to ensure structural integrity. In recent years, the vigorous development of the new energy vehicle industry has brought new opportunities to the adhesive industry. With the widespread application of lightweight materials and high-performance power batteries, the market demand for adhesives with excellent thermal conductivity, insulation properties and structural safety has increased significantly. Faced with increasingly fierce market competition, related companies continue to increase R&D investment and actively deploy global markets. At the same time, driven by policy support from various countries and increased environmental awareness among consumers, the electric car adhesive market is ushering in a broader space for development. From a regional perspective, the global electric car adhesive market shows differentiated development, mainly affected by the new energy car industry policies, supply chain layout and technical level of various regions. China is the world's largest electric car adhesive market, with a market size of US\$2 billion in 2024 and a revenue market share of 68% of the world.

The global Electric Car Adhesive market size was estimated at USD 2922.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.70% during the forecast period.
