Report Overview

The electric chain saw is a power tool designed for cutting wood, featuring a motor-driven chain with sharp teeth that rotates around a guide bar. Unlike gas-powered models, electric chain saws are powered by electricity, either through a corded connection or rechargeable batteries, making them lighter, quieter, and more environmentally friendly. They are commonly used for tasks such as pruning, limbing, felling small trees, and cutting firewood, catering to both homeowners and professionals who prioritize convenience and ease of use over high power output. The market for electric chain saws has grown significantly due to increasing environmental awareness, stricter emissions regulations, and advancements in battery technology, which have improved runtime and power efficiency. Key segments include corded electric models, favored for continuous heavy-duty use, and cordless variants, which offer greater portability and are popular among casual users. Competition is intense among major brands like Stihl, Husqvarna, and DeWalt, with innovation focusing on ergonomics, safety features, and longer-lasting batteries. The DIY trend, urbanization, and demand for low-maintenance tools further drive market expansion, particularly in North America and Europe, where sustainability and noise restrictions influence purchasing decisions. Emerging markets in Asia-Pacific are also seeing growth as electric tools gain traction over traditional gas-powered alternatives.

The global Electric Chain Saw market size was estimated at USD 500.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
