Abstracts

The electric circulation heater market encompasses a range of products designed to provide localized or supplementary heat by using an electric heating element to warm a fluid (typically water or a heat transfer fluid) that is then circulated through a closed-loop system via a pump, offering an efficient alternative to traditional heating methods in residential, commercial, and industrial applications where direct electric resistance heating or fossil fuel-based systems are impractical or cost-prohibitive. These systems are valued for their precise temperature control, ease of installation, and compatibility with renewable energy sources, and they serve diverse use cases such as underfloor heating, domestic hot water recirculation, radiator-based heating retrofits, and process temperature maintenance in industrial settings.

The global Electric Circulation Heater market size was estimated at USD 1382.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
