The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Constant Temperature Oil Bath competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Electric Constant Temperature Oil Bath reached approximately 98,000 units, with an average selling price of approximately US\$1,200 per unit. The single-line production capacity is approximately 5,000 units per year, with an average gross profit margin of approximately 25-35%. Electric Constant Temperature Oil Bath is laboratory equipment that use electric heating elements to heat liquid samples using thermal oil as a medium, providing a precise, stable constant temperature environment. The device uses a built-in heating element to transfer heat to the thermal oil, which is then transferred from the oil bath to the sample. A microcomputer-based PID controller achieves high-precision temperature control. The upstream market primarily includes raw materials such as sheet metal, electrical steel, and plastic pellets, as well as core functional components such as heating tubes, PID temperature controllers, temperature sensors, relays, pumps, and electrical cables. Downstream applications include quality control and process processing (in industries such as pharmaceuticals, chemicals, food, and metallurgy), as well as educational institutions (such as experimental teaching in vocational colleges).

The global Electric Constant Temperature Oil Bath market size was estimated at USD 118.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
