Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric-driven Liquid Supply Skid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of electrically driven liquid supply skids reached 1,309 units, with an average selling price of US\$96,800 per unit, a gross profit margin of 35.68%, and an output of 60 units per unit. The Electric-driven Liquid Supply Skid features automatic liquid supply control, automatically adjusting the liquid supply pump's displacement based on user-defined ratios and variations in the discharge pump's displacement. This ground-based equipment utilizes electric drive technology, variable frequency drive transmission technology, and pressure closed-loop automatic control technology to achieve stepless adjustment and instantaneous response of the liquid supply pump. The Electric-driven Liquid Supply Skid employs variable frequency drive transmission technology to achieve instantaneous response and stepless speed adjustment of the liquid supply pump, resulting in a higher response rate and a wider speed adjustment range. Based on pressure closed-loop automatic control technology, it rapidly adjusts the liquid supply pump speed according to changes in the operating displacement, ensuring stable liquid supply. It effectively reduces noise during operation, achieving zero emissions of air pollutants. It supports manual, automatic, and remote three-level control modes to meet the needs of different application scenarios. It is suitable for fracturing operations requiring precise control of liquid supply volume and pressure.

The global Electric-driven Liquid Supply Skid market size was estimated at USD 127.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.00% during the forecast period.
