## Abstracts

The electric DTH drill rig is a kind of equipment used for underground drilling operations, which is widely used in mining, geological exploration and construction engineering. It drives the drill bit through an electric motor to perform vertical or inclined drilling, and can operate efficiently under different geological conditions. The electric DTH drill rig has the characteristics of low noise, environmental protection, flexible operation and high degree of automation, and can play an important role in urban construction and complex terrain. With the advancement of technology and the emphasis on sustainable development, electric down-the-hole drills have gradually replaced traditional diesel engine-driven equipment and become the main choice for modern drilling operations. The electric down-the-hole drill rig market is growing rapidly, and stricter environmental regulations have prompted more companies to turn to low-noise, low-emission electric equipment to meet the needs of sustainable development. At the same time, technological advances have improved the drilling efficiency and automation level of equipment, making it increasingly widely used in mining, construction, and geological exploration. In addition, continued investment in global infrastructure construction, especially in developing countries, has further promoted the demand for efficient drilling equipment. Competition in the market is becoming increasingly fierce, and manufacturers are winning market share by improving product performance and strengthening after-sales service. Overall, the outlook for the electric down-the-hole drill market is optimistic and is expected to continue to grow driven by both environmental protection and efficiency.

The global Electric DTH Drill Rig market size was estimated at USD 735.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
